University of Freiburg, Chair of forest utilization

- Forest degradation in Argentina

- Strict forest law
 - Delineate homogeneously stocked forest

 - Create FMUs

Objectives

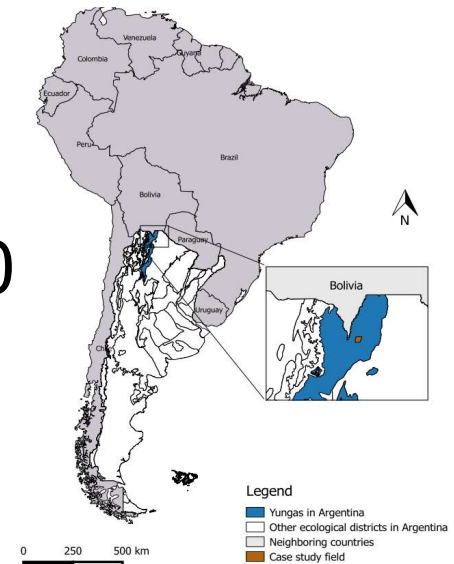

- Map and classify forest by fire severity on a site scale (4000 ha) SPOT6 scene supported with CHM metrics from UAV imagery.
- Identify areas of low and high canopy cover and BA in order to create homogeneous FMU using the tool 'Hot Spot Analysis' from ArcGIS.

Materials and methods

- Object-based segmented SPOT6 image
- Forest inventory: 77 plots in 4000 ha
- UAV flights of 2800 ha: CHM metrics (20 additional plots)
- Classification of image trained with BA and CHM metrics

Correlation of BA and CHM metrics

- THC1: CC (%) from trees height between 5 and 10 m
- THC2: CC (%) from trees height between 10 and 20 m
- THC3: CC (%) from trees higher than 20 m

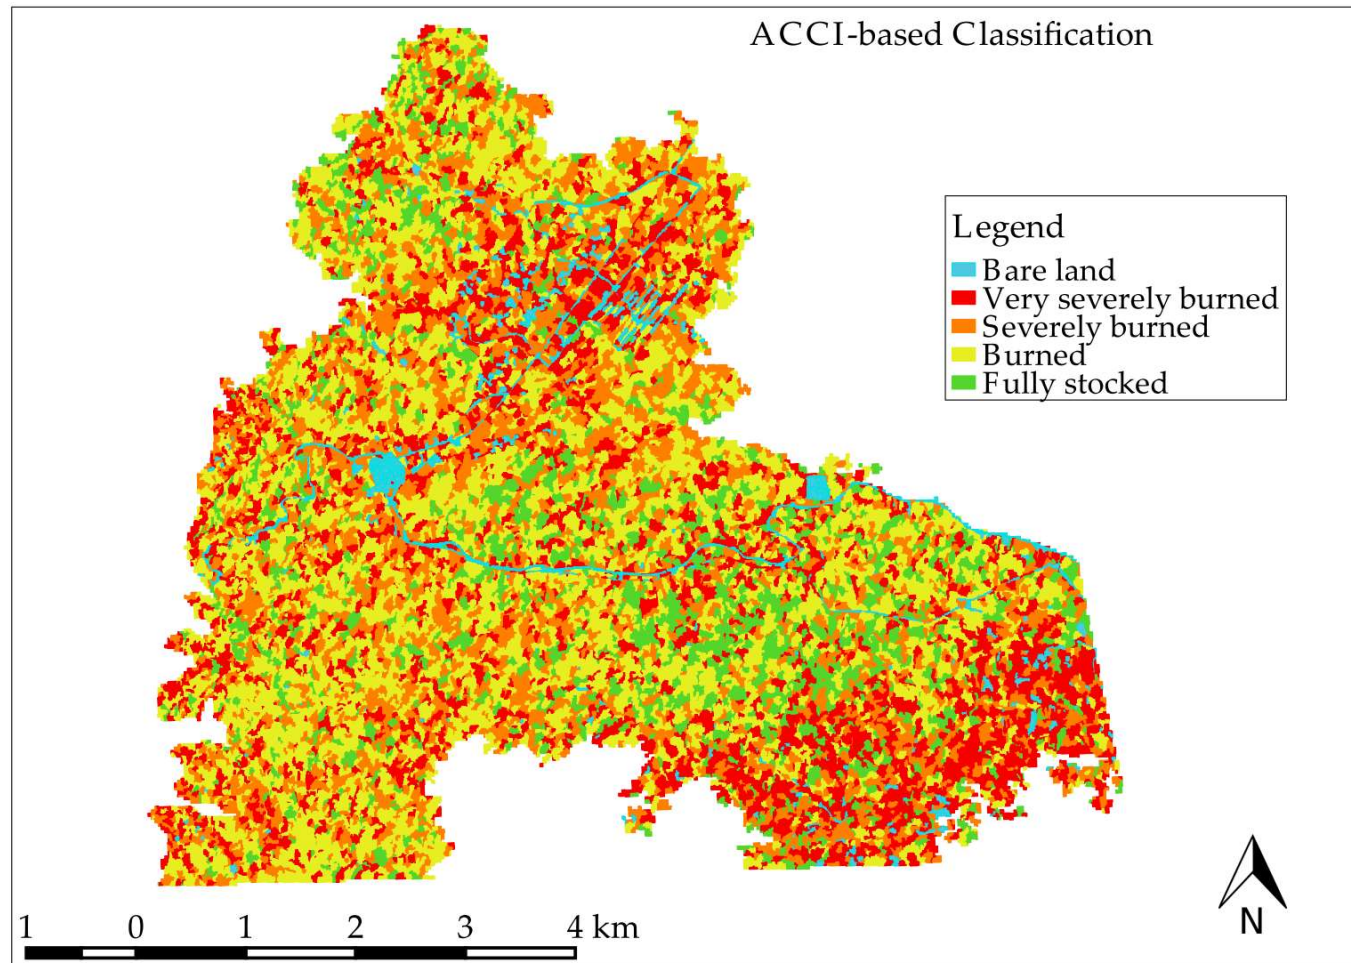

$$BA = a * THC1 + b * THC2 + c * THC3 + d$$

$$Ratio1 = \frac{a}{b} \quad Ratio2 = \frac{c}{b}$$

$$ACCI = Ratio1 * THC1 + THC2 + Ratio2 * THC3$$

Degradation strata	Range ACCI
Very severely burned	≤ 20
Severely burned	> 20 and ≤ 33
Burned	> 33 and ≤ 66
Fully stocked	> 66

Materials and methods

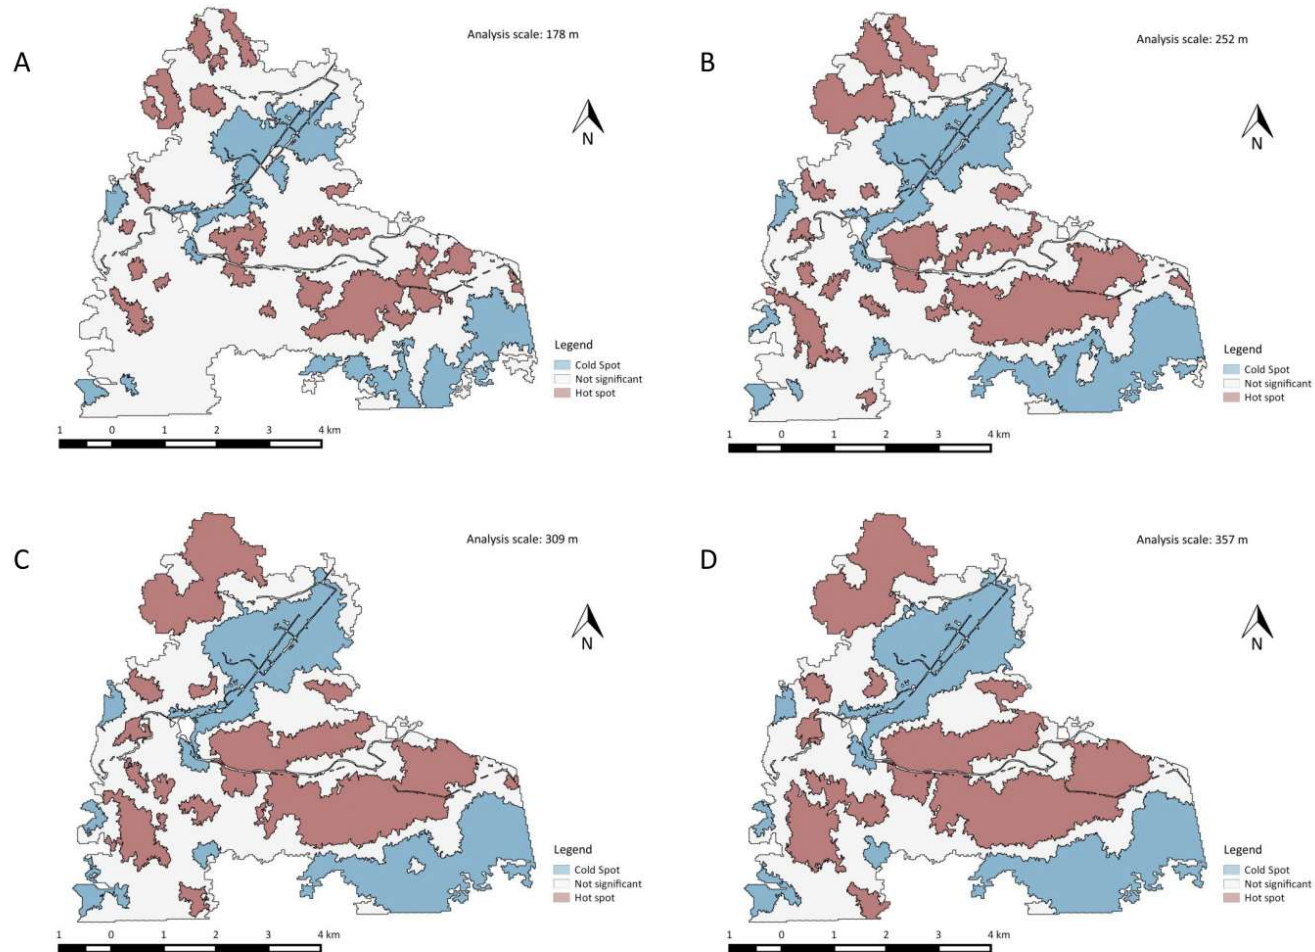

- Moran's I : Overall spatial autocorrelation test

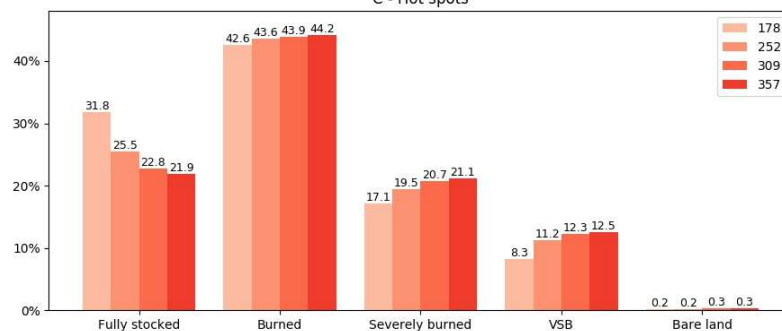

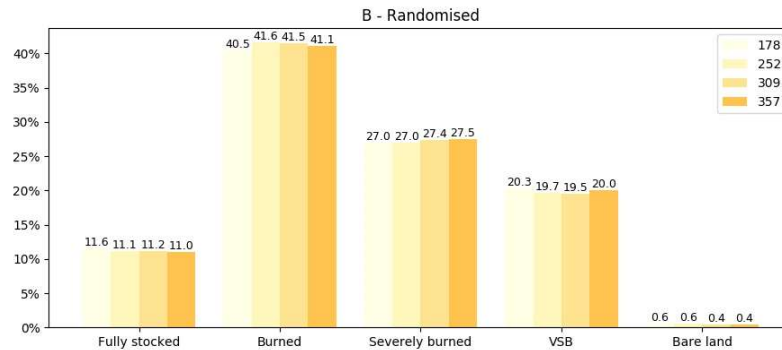

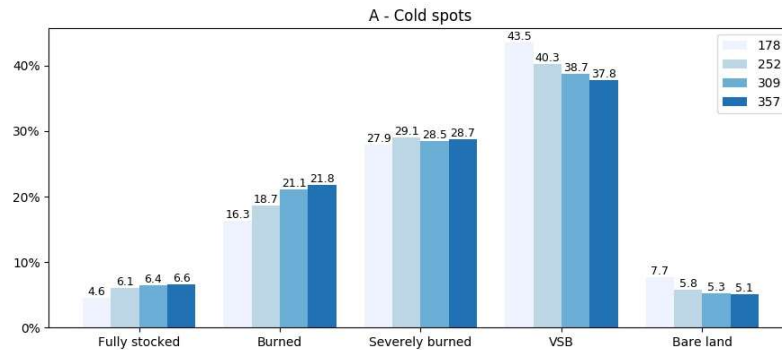

- *Getis-Ord G_i^** :
$$G_i^*(d) = \frac{\sum_j w_{ij}(d) x_j}{\sum_j x_j}$$

- Alternative size management units-Threshold distance:
 - 178 (10 ha)
 - 252 (20 ha)
 - 309 (30 ha)
 - 357 (40 ha)

Results

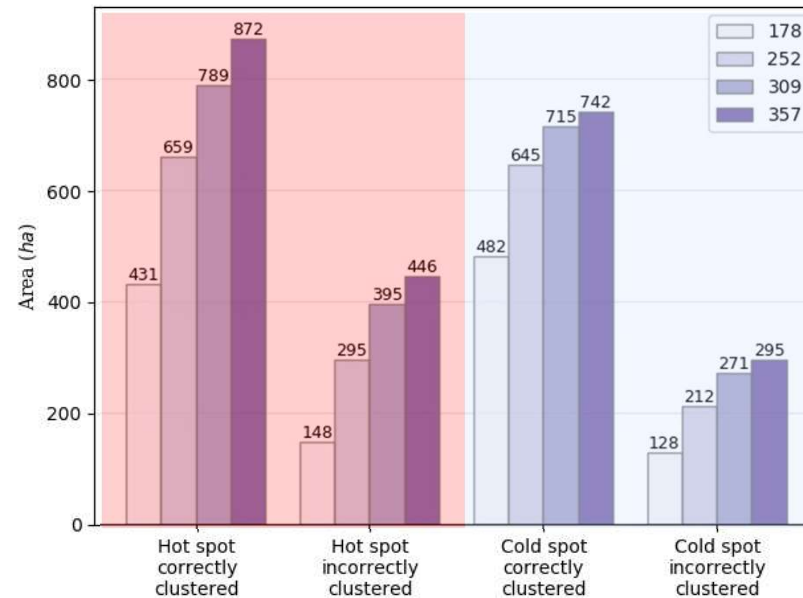

Results

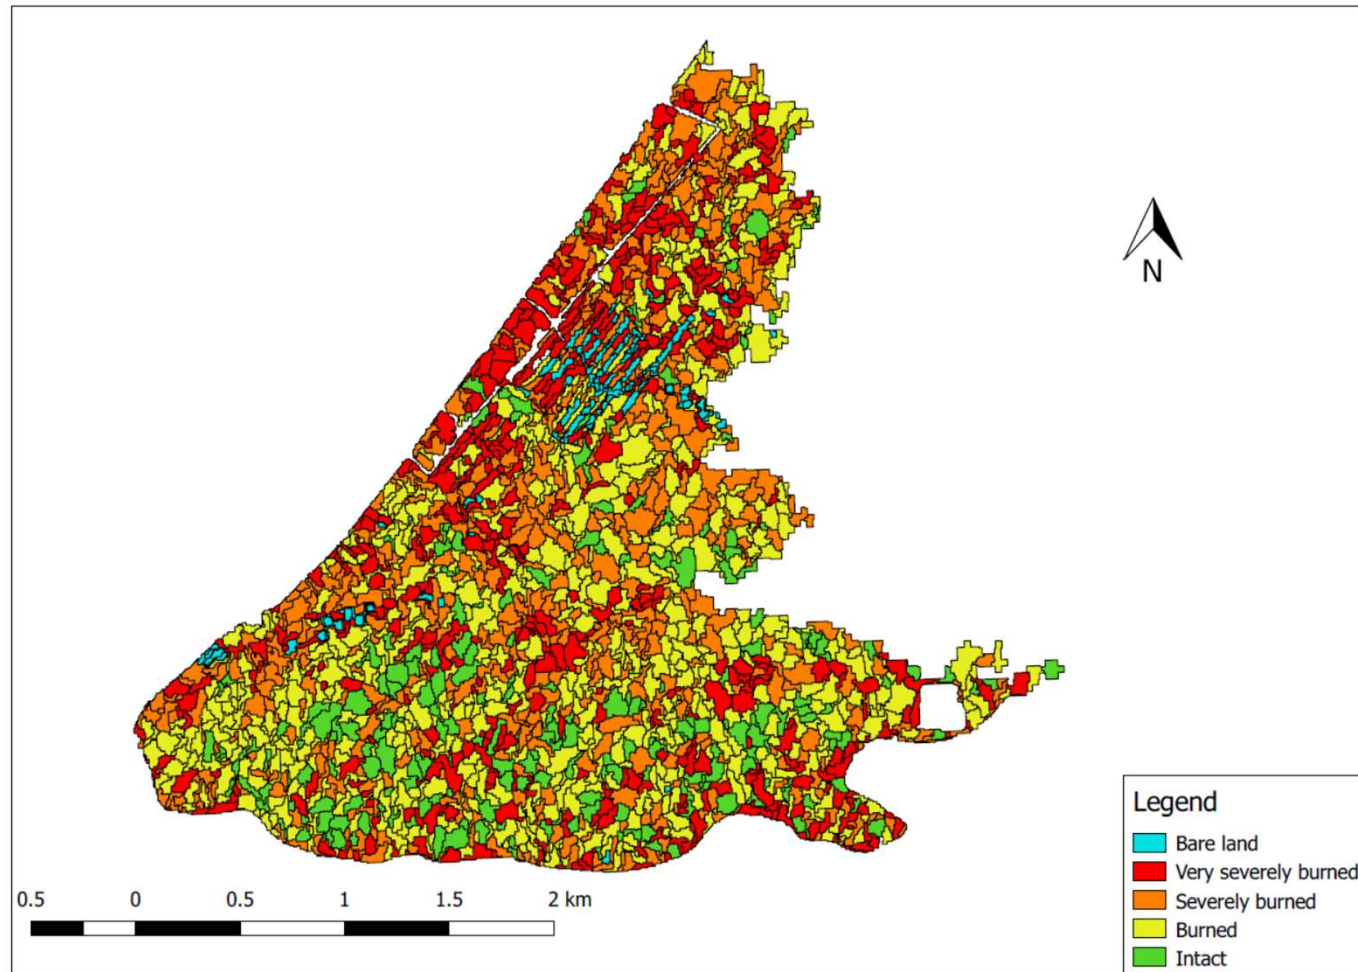

Distance threshold	Total clustered area (ha)	Total clustered area (%)	Average area of clusters (ha)
178	1189.1	30.7	33.9
252	1810.7	46.8	72.4
309	2169.3	56.1	80.5
357	2354.6	60.8	138.5

Results

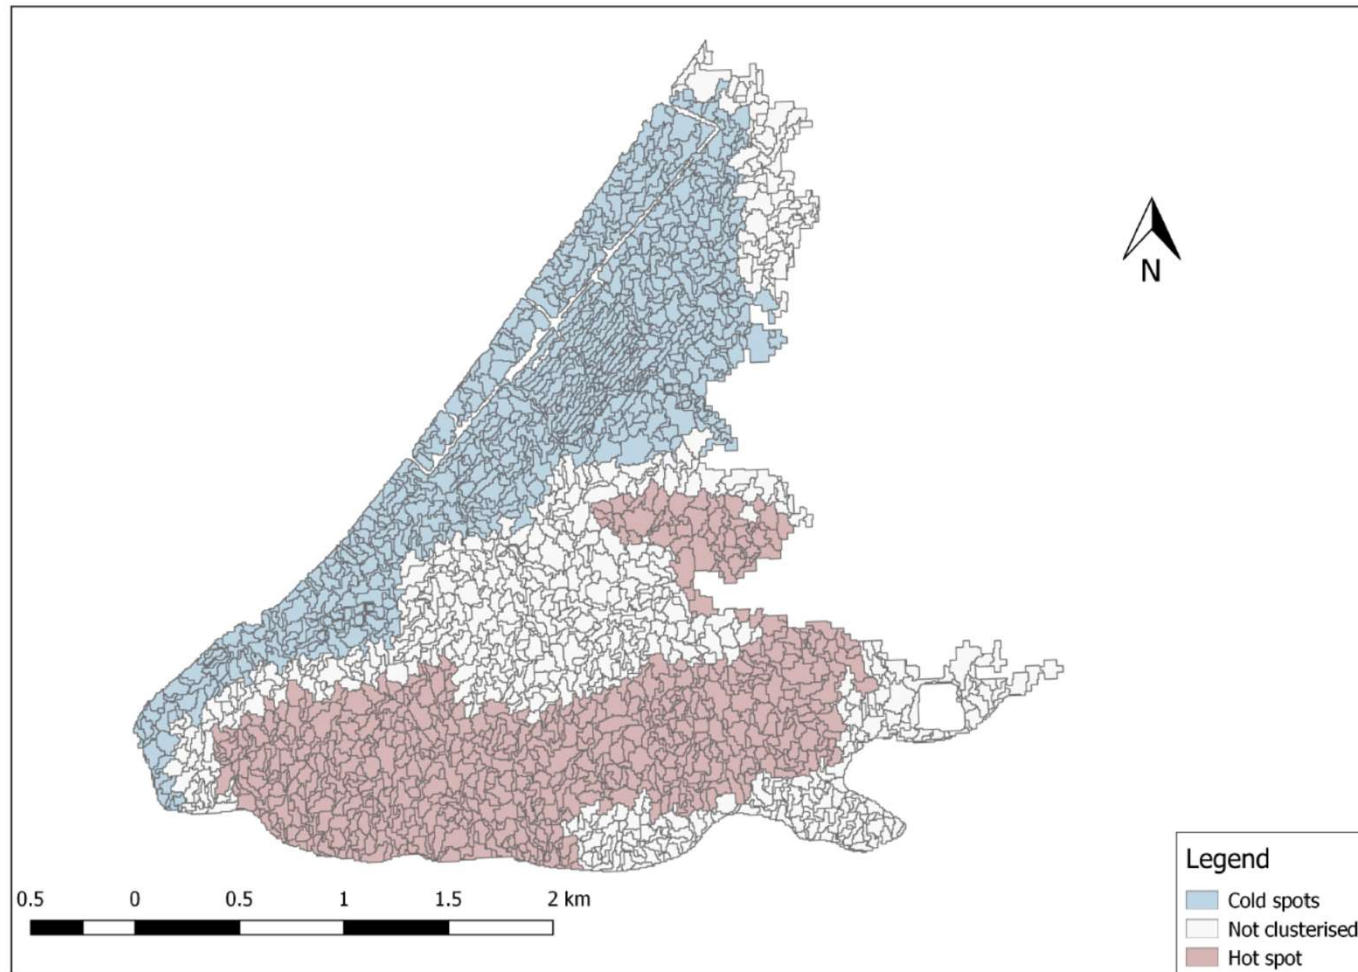

Category	Area (ha)	Percentage of total site (%)	Increment based on total site area (%)	Sum of increments (%)	Increment based on previous threshold area (%)
Correctly clustered at 178 m	913.3	23.6	---	18.1	---
Correctly clustered at 252 m	1303.8	33.7	10.1		30.0
Correctly clustered at 309 m	1503.8	38.9	5.2		13.3
Correctly clustered at 357 m	1613.9	41.7	2.8		6.8
Incorrectly clustered at 178 m	275.8	7.1	---	12.0	---
Incorrectly clustered at 252 m	506.9	13.1	6.0		45.6
Incorrectly clustered at 309 m	665.5	17.2	4.1		23.8
Incorrectly clustered at 357 m	740.7	19.1	1.9		10.2

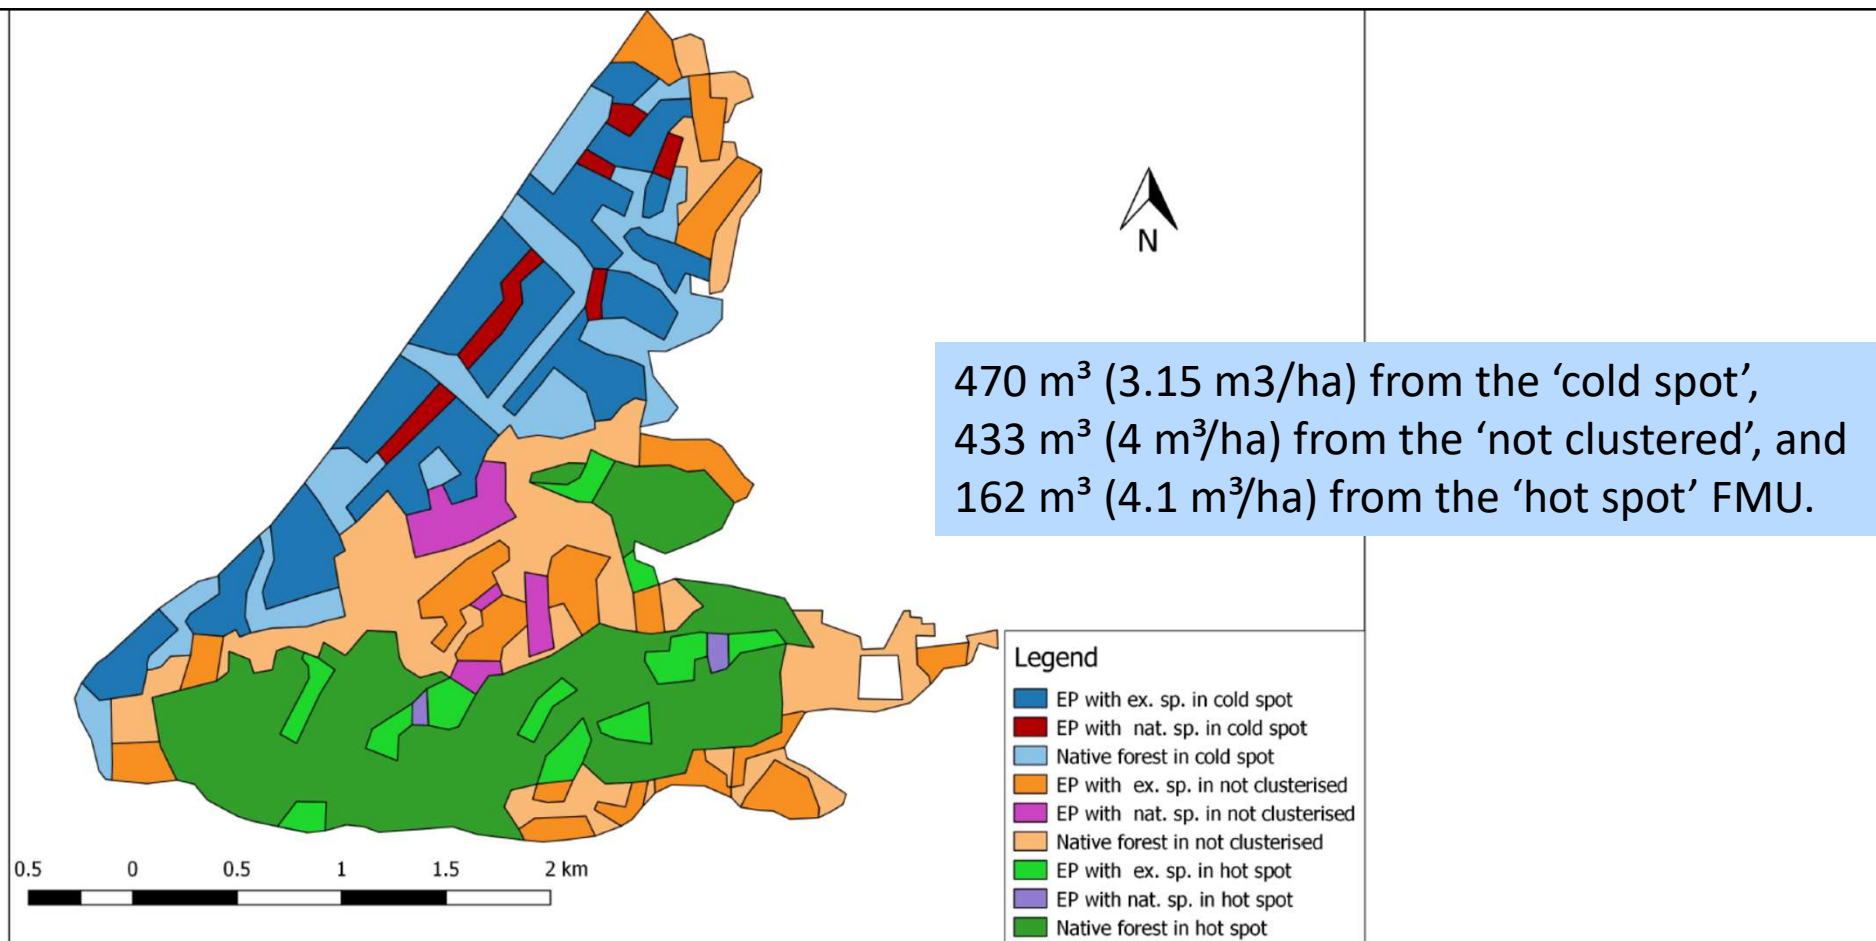

Example 750 ha- Classification

Example 750 ha- Clusterisation

FMU id	Total area	EP with exotic species	EP with native species	Native forest
Cold spot	239.2	132.4 (55.4)	15.8 (6.6)	90.9 (38.0)
Not clustered	242.2	88.9 (35.1)	19.1 (7.5)	145.3 (57.4)
Hot spot	253.3	37.4 (15.4)	3.0 (1.3)	201.8 (83.3)

- `Resolution paradox`
- Getis-Ord G_i^* is a useful tool for the creation of homogeneous management units
- Distance thresholds: set a rule in advance
